[@gmail.com](mailto:shalithad8520jayasekara@gmail.com)

SKILLS

Languages & Framework, Libraries

- Angular
- Bootstrap
- Angular Material
- NgZorro
- NgRx, Angular Signals
- RxJS
- ASP.Net Core
- Entity Framework Core
- React
- Next
- HTML5
- CSS/SCSS
- C#
- Typescript
- (Angular) Ionic

Database

- SQL Server
- PostgreSQL
- MySQL

Tools & Software

- Docker
- GitHub
- Azure
- Google Cloud
- Postman
- Swagger
- SignalR

PROFILE

Experienced BSc graduate | 4+ years of Debugging & Code Maintenance | Boosted performance of more than 8 applications | Angular, ASP.NET Core, React | Seeking ceative project opportunities.

EXPERIENCE

Full Stack Software Engineer | Cube360 | Feb 2023 — Present

- * Orchestrated the design of an admin application frontend utilizing Angular workspace, streamlining management tasks within the RMS to reduce administrative workload by over 30 hours monthly across restaurant operations.
- * Spearheaded refinements in daily workflows via a newly designed fuel station application centered around subscriptions, identifying key areas needing improvement based on direct feedback collected from end-users throughout development stages.
- * Architected an efficient backend API streamlined on managing subscriptions while adhering to clean architecture guidelines; empowered fuel station operators with tools that elevated daily workflow efficiency and enhanced overall business performance.

Associate Software Engineer | Cube360 | Jan 2022 — Jan 2023

- * Developed key features within an innovative Vehicle Bidding Management System focused on automation; achieved synchronization of thousands of auction listings seamlessly allowing for real-time updates during events.
- * Coordinated efforts between clients and developers to define specifications for a comprehensive web application; implemented streamlined backend APIs utilizing Angular and .NET that fortified system performance by 30%.
- * Automated critical tasks and optimized user experience, synchronizing 85,000+ auction items daily and enabling efficient bidding with predefined auction paper translations.

Software Engineer Trainee | Cube360 | Jan 2022 — Apr 2023

- * Played an instrumental role in creating the 'Pharmacare' ERP system as an intern; executed sophisticated coding solutions that elevated performance metrics, achieving enhancements to daily operations with speeds increasing between 40% and 50%.
- * Enhanced data retrieval processes by adjusting existing algorithms, resulting in a considerable 40% to 50% improvement in the speed of daily operations for pharmacy management systems.
- * Managed the design and implementation of an efficient CI/CD process through Docker integration with Heroku; achieved over 40% decrease in operational discrepancies during software updates compared to previous methodologies.

Software Engineer Intern | Vertex | Jan 2021 — Dec 2021

- * Developed and optimized Hotel Management Systems (HMS) and Restaurant Management Systems (RMS), achieving a 30-35% reduction in daily operational tasks while enhancing productivity by 45% across two restaurant locations.
- * Designed modular components with Angular that improved code efficiency by reducing redundancy through reusable elements; this effort resulted in saving approximately 60 hours per quarter during development phases.
- * Authored over 20 unique user story drafts focused on core functional requirements that strengthened team collaboration among developers and improved sprint completion rates by achieving project milestones faster than projected timelines.

EDUCATION

SRI LANKA INSTITUTE OF INFORMATION TECHNOLOGY — BSC (HONS) IN
INFORMATION TECHNOLOGY, 2022
